

**NOT ALL CLINICS ARE CREATED EQUAL.** Founded by cosmetic treatment innovator Dr Munir Somji and his wife Henal Somji in 2012, DrMediSpa delivers medically proven treatments in world-class surroundings. Whatever the concern, be it acne, pigmentation, skin laxity, ageing or hair loss, DrMediSpa's bespoke, patient-focused ethos guides everything they do. This applies not only to their extensive non-surgical portfolio, but also to the range of surgical procedures they offer, all approved by the Care Quality Commission.

Together, Munir and Henal make a particularly effective team. As Chief Medical Officer, Dr Somji's meticulous approach has seen him become an innovator in the creation and development of 'Soft Surgery', minimally invasive non-surgical and surgical treatments which offer an alternative to traditional plastic surgery and no visible scarring. These are particularly sought-after by younger patients, who are conscious of preventative age management.

Dr Somji's subtle micro-surgical changes allow the body to harness its own natural regenerative powers. The inventor of such treatments as the Keyhole Facelift™ and Contour Once™, Dr Somji is also respected as a world leader in both male and female hair restoration.

Meanwhile, Henal Somji is Group Director and Operations Manager, overseeing the DrMediSpa brand. Complementing her husband's medical expertise, she is closely involved in human resources, social media, marketing, public relations and clinic operational management. Combining seven years of experience in the cosmetic, aesthetic and beauty industry, Henal works closely with Dr Somji to develop innovative treatments. Like him, she intuitively understands what customers want.

Happily, the breadth of expertise available at DrMediSpa has the solution for a whole range of concerns. Take threads, for example: the sheer depth of Dr Somji's understanding has seen him hailed as the 'thread master'. This is thanks not only to his all-encompassing knowledge of the myriad threads available on the market, but crucially also the very best application of each type for any particular area. His 'Soft Surgery' know-how comes to the fore with such thread methods as Silhouette Soft, Spring Threads and MyEllevate. Whether the concern is facial, jawline or neck, Dr Somji's expertise ensures the optimum outcome for every individual.

Dr Somji's instinctive empathy with patients

**TWO'S COMPANY**  
Left, Dr Munir Somji and Henal Somji, the husband-and-wife team behind DrMediSpa. Below, the interior of the Knightsbridge clinic

is also intrinsic to his professional signature – and having experienced hair loss himself, he understands the particular emotional turmoil it can cause. He knows patients can have faith in Regenera, the one-appointment stem cell treatment to stimulate hair growth and thicken existing hair, using the scalp's natural regeneration mechanisms. In addition to hair loss and alopecia, it can also treat skin trauma such as scarring, burns and blemishes, bone and cartilage regeneration and most commonly, skin revitalisation and rejuvenation.

Only the most state-of-the-art technologies are to be found at DrMediSpa, which are both clinically proven and highly effective for a range of concerns. The clinic is among the very first in the UK to offer the cutting-edge EMERALD Laser™ for the reduction of stubborn body fat and creation of a more svelte silhouette. It is the most advanced 'laser lipo' treatment available worldwide, as well as being easy to incorporate into a busy schedule due to the fact that it is non-surgical and non-invasive.

Furthermore, DrMediSpa is the first UK clinic to introduce PrimeX™ from Alma, one of the global leaders in energy-based medical and aesthetics solutions. With a combination of patented ultrasound and radiofrequency technologies, PrimeX™ achieves unparalleled results in circumference reduction and skin tightening in the abdo-

men, waist and buttocks.

DrMediSpa can also advise on an extensive portfolio of injectable treatments ranging from wrinkle relaxing and dermal fillers, to skin boosters and specialist collagen stimulators such as Restylane, Sculptra, Profilllo®, Ellansé® and MaiLi, the smart premium hyaluronic acid dermal filler which launched recently in the clinic. Together with his expert team, Dr Somji can custom-blend and layer non-surgical, 'soft surgical' and surgical treatments to achieve subtle micro-surgical changes which harness the body's natural regenerative powers to regain its own youthful contours.

"Today's client is savvy, well-researched and learned," says Henal Somji. "They have high expectations. Here at DrMediSpa, we build our treatment plans and protocols to exceed those expectations. We look at every aspect of a patient, from their lifestyle to their skin regime. That's the secret to our success." We couldn't agree more.
